GENERAL DESCRIPTION

The ACI-1903 is a universal driver utilizing the 3rd generation of I-Drive technology used for powering LED backlights.

This driver includes a Mode Select feature, enabling the user to select one of four maximum current settings by the user providing a Mode Select Resistance (MSr) between Pins 10 and 11 of CON1, enabling the driver to support a wide range of LED Rails.

Operating as a true constant current source and capable of driving up to 40 LEDs in series, this driver provides a complete integrated solution that is regulated over an input range of +8V to +18V.

Simple to connect and operate, this driver solution is capable of providing precise control to supporting dimming applications with a minimum of 3000:1.

This unit also features an enable control input.

APPLICATION NOTES

Connection Diagram:

1. Input Cable Assembly sets the maximum output current level, by including the required resistance between pins 10 and 11 (refer to Mode Select section of LED Driver specification in this document).
2. If Enable (PIN 7) is not being used, it can be left electrically floating.
3. If no dimming is required, connect Icntl (PIN 8) to +5V REF OUT (PIN 12).
4. If dimming is required, the +5V REF OUT (PIN 12) may be used for high-side of Intensity Control Potentiometer. A 10K Ohm Potentiometer is recommended.
